MedStar Health, Inc. POLICY AND PROCEDURE MANUAL

Policy Number: MP.146.MH Last Review Date: 05/04/2021 Effective Date: 09/01/2021

MP.146.MH Rabies Vaccine, Home

This policy applies to the following lines of business:

- ✓ MedStar Employee (Select)
- ✓ MedStar CareFirst PPO

MedStar Health considers **Rabies Vaccine in the Home Setting** medically necessary for the following indications:

- 1. Member presented to ER after a possible rabies exposure.
 - a. Member receives rabies immunoglobulin (if not previously vaccinated) and rabies vaccine.
 - Member receives Post-Exposure Rabies Treatment Record and Information Sheet
- 2. Member received clear post-discharge instructions.
- Member is discharged from ER, with instructions to follow-up with the VNA for repeat vaccinations at day 3, 7, and 14 (and day 28 for immunocompromised patients.)
 - a. VNA follows-up with patient at days 3, 7, and 14 (and 28) for repeat IMOVAX doses. A record of these doses is kept.
 - b. The IMOVAX injection site is given in an alternating fashion, from side-to-side, on the opposite side of the last dose.
 - c. If a patient has been previously vaccinated for rabies, only the day 3 dose is needed.
 - d. If a patient is immunosuppressed by any disease, medication, or therapy (broadly defined), an additional dose should be given on day 28 <u>plus</u> be tested for rabies virus neutralizing antibody between days 35-42 after exposure.

Limitations

See Place of Service Modifier in Coding Section Below. This policy is for administration of the rabies vaccine in the home setting only.

Background

MP.146.MH - Rabies Vaccine, Home

Policy Number: MP.146.MH Last Review Date: 05/04/2021 Effective Date: 09/01/2021

The CDC categorizes Rabies as a serious disease caused by a virus. Humans get rabies when they are bitten by infected animals. The CDC reports that human rabies is rare in the United States. There have been only 55 cases diagnosed since 1990.

However, the CDC estimates between 16,000 and 39,000 people are vaccinated each year as a precaution after animal bites. The rabies vaccine is given to people at high risk of rabies to protect them if they are exposed. It can also prevent the disease if it is given to a person after they have been exposed.

Codes:

| CPT Codes / HCPCS Codes / ICD-10 Codes | | | |
|--|---|--|--|
| Code | Description | | |
| 90675 | Rabies vaccine, for intramuscular use | | |
| 90676 | Rabies vaccine, for intradermal use | | |
| 90375 | Rabies immune globulin (rlg), human, for intramuscular and/or subcutaneous use | | |
| 90376 | Rabies immune globulin, heat-treated (Rlg-HT), human, for intramuscular and/or subcutaneous use | | |
| 90377 | Rabies immune globulin heat- and solvent/detergent-treated (Rig-HT S/D), human, for intramuscular and/or subcutaneous use | | |
| ICD-10 Codes | | | |
| A82.9 | Rabies, unspecified | | |
| A82.1 | Urban rabies | | |
| A82.0 | Sylvatic rabies | | |
| Z20.3 | Contact with and (suspected) exposure to rabies | | |
| Z23 | Encounter for immunization | | |

Modifier:

| Place of Service Code | Place of Service Name | Place of Service Description |
|-----------------------|-----------------------|--|
| 12 | Home | Location, other than a hospital or other facility, where the patient receives care in a private residence. |
